

COLLECTOR INTELLIGENCE TERMINAL

LEGO Resale Intelligence V2

A seed-backed resale intelligence product for LEGO collectors, evolved from a working V1 analyzer into a deployed FastAPI and Next.js app.

- FASTAPI
- NEXT.JS
- ANTHROPIC
- RAILWAY + VERCEL

RESALE INTELLIGENCE

V1 PROVED THE SIGNAL

A one-off listing analyzer was useful. Collectors need a repeatable market workflow.

V1 could turn a marketplace URL into a buying signal. V2 expands the job: track sets, portfolio exposure, price history, watchlists, briefings and data confidence.

MARKET

Collectors need set trends and context, not only one listing at a time.

WATCH

Interesting opportunities should be tracked, filtered and revisited.

PROOF

Seed data must not be sold as verified live market evidence.

DEMO

A portfolio project needs public links, tests and a clear story.

PRODUCT FLOW

One URL. Then a wider decision system.

Real URL analysis still exists, but V2 adds dynamic fair price, confidence, anomaly context and a no-cost demo flow for safe portfolio demos.

V2 · PUBLIC DEMO

Analyze Listing

Paste a URL — V2 adds dynamic fair price, confidence, and anomaly context.

LIVE ANALYZER

Paste an eBay, Wallapop or marketplace listing URL

Analyze

Load no-cost demo opportunity

Real URLs use the V1 extraction pipeline. The demo opportunity is local and does not spend Anthropic tokens.

Listing URL

STATUS

Idle

Waiting for a listing

Paste a URL to create the first V2 enriched analysis.

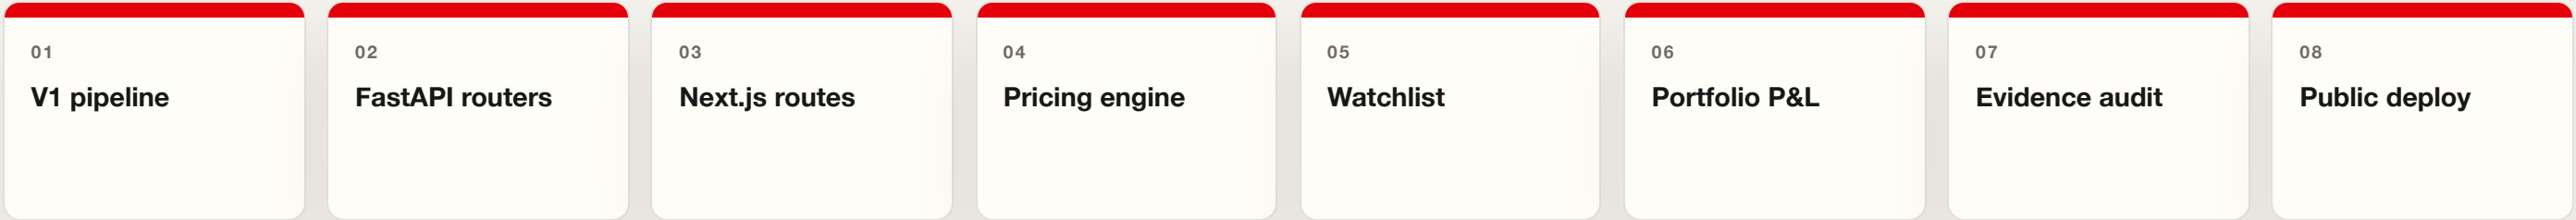

WATCHLIST

EXPLAIN

EXPLAINABLE SYSTEM

V2 grows around the stable V1 core instead of throwing it away.

The old pipeline remains useful. The new architecture adds an API, typed frontend, data-quality layer and deployment path while keeping local fallback data for demos.

HONEST INTELLIGENCE

The strongest V2 decision was not overclaiming the data.

0 THEMES

Evidence rule

A candidate needs all 8 evidence checks before promotion to the active catalog: release year, retirement, retail price, piece count, source links, and at least 3 market price snapshots. Active sets need the same evidence before being called externally verified. No invented prices — ever.

ACTIVE AUDIT LOG

50 reviewed

10030

Star Wars

Imperial Star Destroyer

Brickset and BrickEconomy align on the canonical metadata used by the app: 2002 release, 3096 pieces and USD 269.99 RRP. BrickRanker remains useful for value history but conflicts on legacy metadata, so DATA-4 accepts Brickset/BrickEconomy as canonical for this set.

3 metadata3 price sources3 snapshots

verified

verified

10179

Star Wars

Ultimate Collector's Millennium Falcon

Core metadata matches, but European retail price differs by source/region. Keep out of verified count until a canonical EU retail price rule is chosen. DATA-3 policy: use Europe-wide retail price when a France-specific price disagrees; BrickEconomy supplies EUR 499.99 and core metadata aligns.

2 metadata2 price sources3 snapshots

EVIDENCE STATUS

49 verified / 1 under review

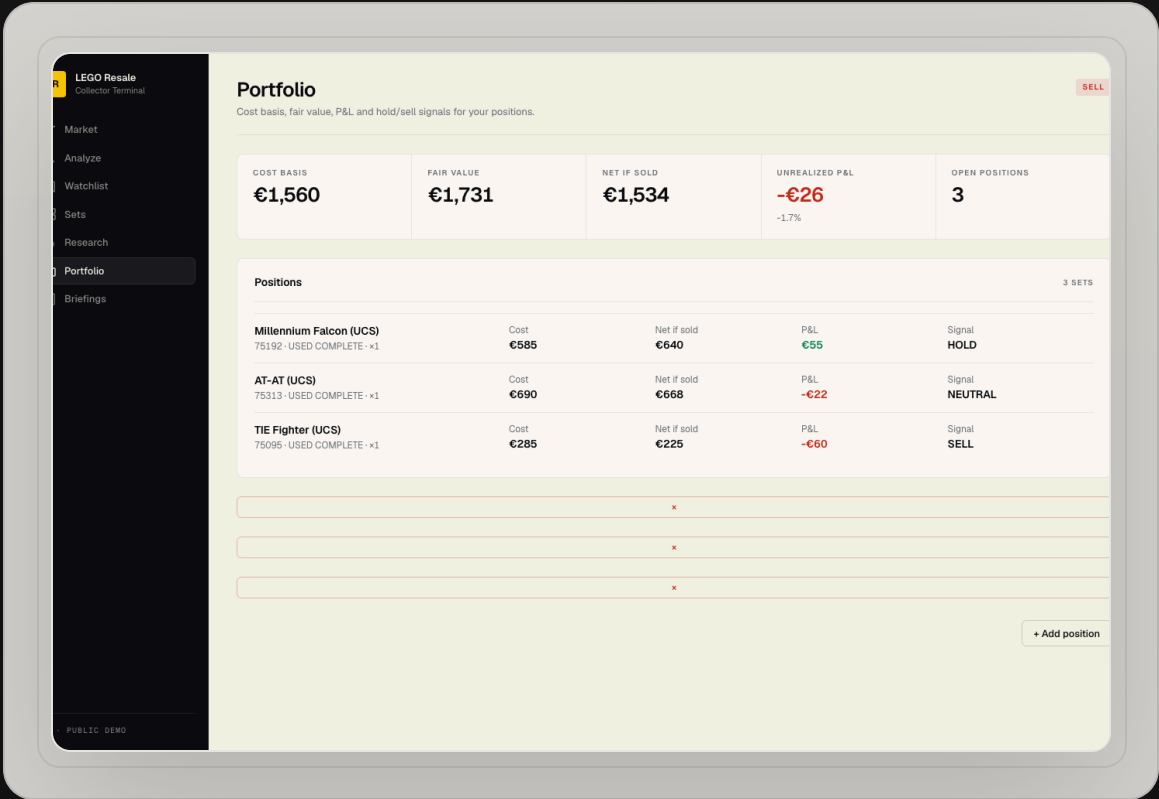

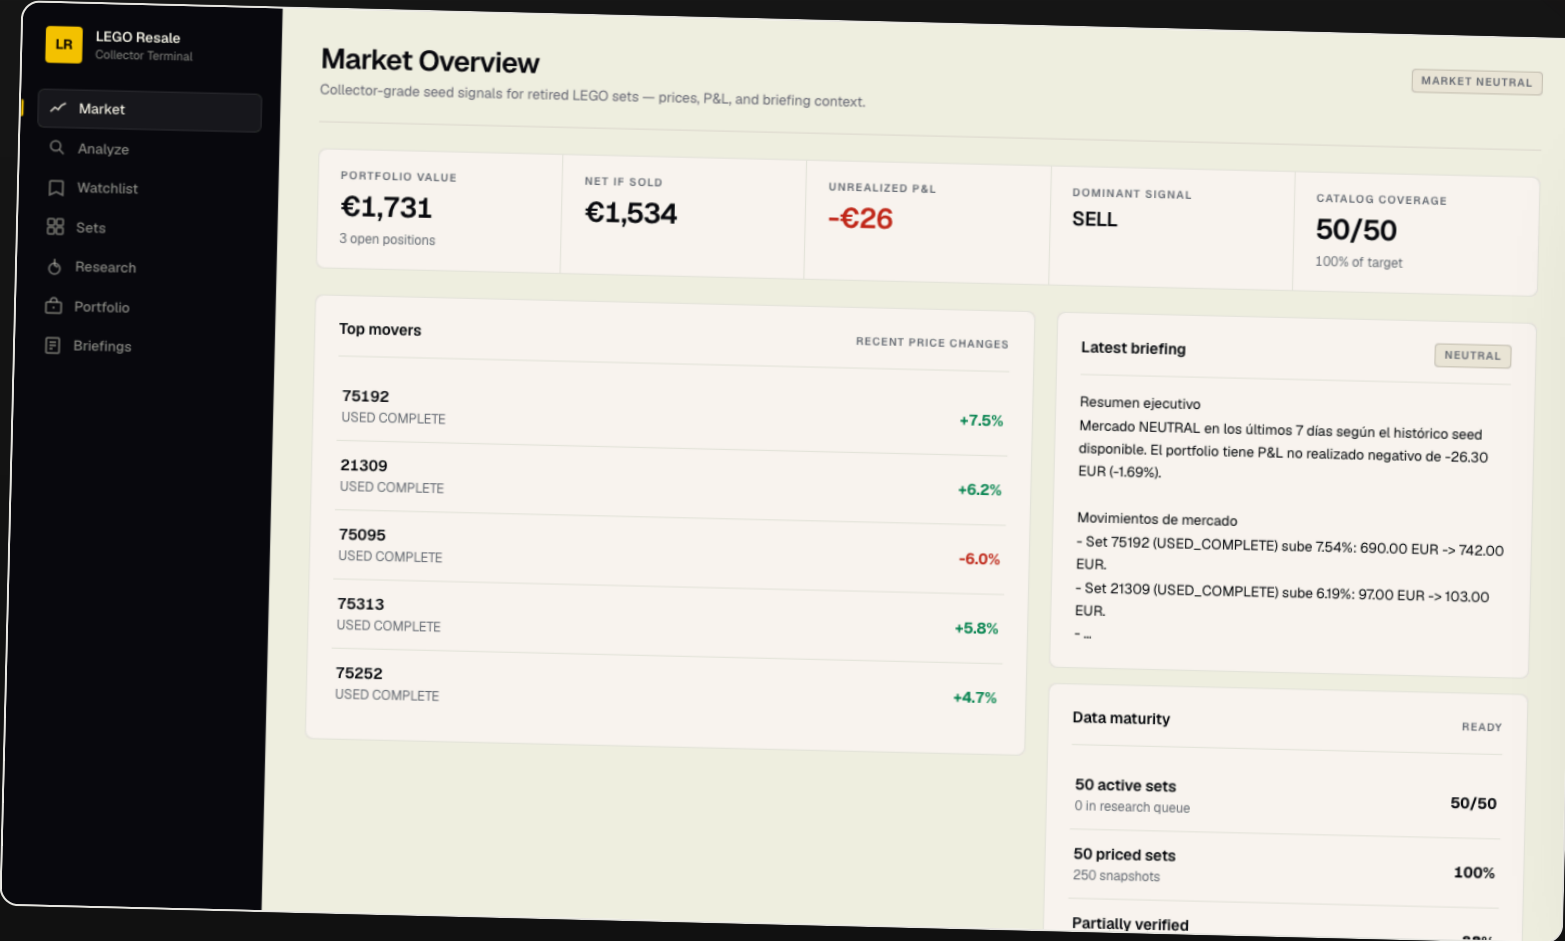

PUBLIC CLAIM

Seed-backed, partially verified prototype

VISUAL SYSTEM

A product-grade UI with restrained LEGO cues.

The direction keeps the V1 case study personality: premium layout, yellow/red LEGO signals, dense operational dashboards and no childish toy styling.

TRACEABLE WORKFLOW

Analysis can become an action, not just an answer.

PORTFOLIO FRAMING

The case study is stronger because it admits what is still seed data.

Say this

- Seed-backed LEGO resale intelligence prototype.
- Production-style FastAPI and Next.js architecture.
- Data-quality gates and evidence tracking.
- Public demo deployed on Railway and Vercel.

Avoid this

- Fully verified live market pricing platform.
- All 50 sets are proven real market data.
- Price history comes from live BrickLink data.
- Commercial resale advice without source caveats.

CLOSING SIGNAL

From noisy marketplace listings to an honest collector intelligence product.

LEGO Resale Intelligence V2 shows end-to-end product engineering: preserving a working V1, expanding the product surface, adding evidence governance, deploying publicly and documenting limits clearly.
