

Fase 3A UI Report

Premium Streamlit Experience

Primera capa visual premium para una herramienta de inteligencia de reventa LEGO. Mantiene el pipeline real de Fase 2 y eleva la presentacion para portfolio.

- Overview editorial con tono museo + producto digital.
- Analyze conectado a captura, Anthropic, catalogo, scoring y SQLite.
- Estados premium: empty, loading, success y error.
- Vista detalle simple para analisis guardados.

Overview

Landing editorial premium: museo, coleccionismo e intelligence tool.

LEGO RESALE INTELLIGENCE

PHASE 3A PREMIUM STREAMLIT EXPERIENCE

Overview Analyze About

COLLECTOR-GRADE RESALE INTELLIGENCE

A calmer way to read retired LEGO opportunity.

LEGO Resale Intelligence turns marketplace noise into a focused buying signal: fair price, net margin, risk flags and an opportunity score for retired sets.

LOCAL SQLITE ARCHIVE

01 / SIGNAL
Price discipline over impulse browsing.
The app translates asking price, fair price and resale costs into a single opportunity reading.

02 / COLLECTION
A museum-like surface for retired sets.
The visual system treats listings as collectible objects, not generic rows in a spreadsheet.

03 / INTELLIGENCE
LLM extraction, local scoring, clear limits.
Anthropic structures listing text; the Python core keeps scoring explicit, testable and easy to explain.

Analyze

 LEGO RESALE INTELLIGENCE

PHASE 3A PREMIUM STREAMLIT EXPERIENCE

[Overview](#) [Analyze](#) [About](#)

METHOD & SCOPE

A transparent system, not a black box.

The product combines a small local catalog, manual fair price references, LLM extraction and explicit scoring rules. Every result should be explainable.

PIPELINE

01

Capture

Download one listing HTML with a conservative parser.

02

Extract

Anthropic structures title, set ID, condition and risks.

03

Identify

The set is matched against the local CSV catalog.

04

Price

Manual fair price references anchor the estimate.

05

Score

Margins, risk and marketplace produce a score.

06

Archive

SQLite stores the analyzed listing locally.

SCORING

Simple enough to defend.

Net margin drives the score. Risk flags reduce confidence. GREEN requires both a strong score and positive absolute margin.

LIMITATIONS

Marketplaces are messy.

Listings can disappear, HTML can change and eBay may block requests. These are documented constraints, not hidden failures.

STATUS

Ready for product polish.

Phase 2 is validated. Phase 3A focuses on experience, presentation and confidence without changing the core pipeline.

Criterio de cierre

Implementado

La Fase 3A mantiene Streamlit y no introduce arquitectura nueva. El pipeline de Fase 2 sigue siendo el nucleo operativo.

Verificado

Los tests automatizados pasan y las capturas principales quedan guardadas en docs/screenshots/.

Pendiente natural

El siguiente bloque razonable es una revision responsive y decisiones de Fase 3B, sin mezclarlo con nuevas features de backend.
